Meadowscaping for Biodiversity

www.meadowmaking.org

Outdoor Education that Celebrates the Earth!

Outdoor environmental education program for students of all ages. Participants repurpose monoculture turf lawn into meadows—productive, attractive ecosystems gardens with native flowers, shrubs, and grasses—to increase biodiversity, pollinators, and wildlife habitat. With an unique 8-unit curriculum, we educate citizen scientists and stewards of the Earth.

The National Wildlife Federation designated our demonstration meadow at 750 Main Street, Waltham, MA, as a Certified Wildlife Habitat!

Plan Ahead for Next Spring.

Parents/Guardians: Your child could be outdoors learning about nature, giving back to the Earth, and having the time of his or her life. Adults are welcome to sign up for programs.

Businesses: Did you know that your expensive lawn is covering up precious natural resources? Give back to your community by making some of your lawn accessible for Meadowscaping educational projects.

YMCAs, Boys and Girls Clubs, Boys Scouts, Girl Scouts, Homeschoolers, 4-H Clubs, mentoring groups: Supplement your programming by offering members special afterschool and summer experiences that will bring them back year after year.
